Your page could be better

Recommendations: 15

We combine technology with hands-on guidance to help clients make informed, resilient decisions.

Our Approach

We believe effective data protection starts with understanding your business reality, not just technical requirements.

That is why our approach begins with risk, continuity, governance, and operational need. From there, we design and deliver the right mix of backup, recovery, transfer, security, and advisory support to create a solution that is fit for purpose, scalable, and practical to manage.

For some clients, that means direct implementation and support. For others, it means a partner-enabled model that extends enterprise-grade capability into their own client environments.

On-Page SEO Results

Your On-Page SEO is good

Your page is mostly optimized for On-Page SEO performance. On-Page SEO is important to ensure Search Engines can understand your content appropriately and help it rank for relevant keywords. You can continue to improve your page by ensuring HTML Tag Content is completed correctly and text content is well aligned with chosen keywords.

Title Tag

You have a Title Tag, but ideally it should be shortened to between 50 and 60 characters (including spaces).

Enterprise Cloud Backup & Data Protection | Montana Data Company

Length : 64

Title Tags are very important for search engines to correctly understand and categorize your content.

Meta Description Tag

Your page has a Meta Description Tag however, your Meta Description should ideally be between 120 and 160 characters (including spaces).

Montana Data Company helps organisations protect, recover, move, and govern critical data through enterprise-grade cloud backup, secure transfer, and cyber resilience.

Length : 167

A Meta Description is important for search engines to understand the content of your page, and is often shown as the description text blurb in search results.

SERP Snippet Preview

This illustrates how your page may appear in Search Results. Note, this is intended as a guide and Search Engines are more frequently generating this content dynamically.

Amount of Content

You page has a low volume of text content which search engines can interpret as 'thin content'.

✗

Word Count: 672

It has been well researched that higher text content volumes are related to better ranking ability in general.

Image Alt Attributes

You have images on your page that are missing Alt Attributes.

We found 26 images on your page and 1 of them are missing the attribute.

Alt Attributes are an often overlooked and simple way to signal to Search Engines what an image is about, and help it rank in image search results.

Usability

Your usability could be better

Your page is OK but could be more usable across devices. Usability is important to maximize your available audience and minimize user bounce rates (which can indirectly affect your search engine rankings).

Device Rendering

This check visually demonstrates how your page renders on different devices. It is important that your page is optimized for mobile and tablet experiences as today the majority of web traffic comes from these sources.

Google's Core Web Vitals

Google is indicating that they do not have 'sufficient real-world speed data for this page' in order to make a Core Web Vitals assessment. This can occur for smaller websites or those that are not crawl-able by Google.

Use of Mobile Viewports

Your page specifies a Viewport matching the device's size, allowing it to render appropriately across devices.

Google's PageSpeed Insights - Mobile

Google is indicating that your page is scoring poorly on their Mobile PageSpeed Insights evaluation.

Note that this evaluation is being performed from US servers and the results may differ slightly from an evaluation carried out from Google's PageSpeed Web Interface as that reporting localizes to the region in which you are running the report.

Google has indicated that the performance of a webpage is becoming more important from a user and subsequently ranking perspective.

LAB DATA	VALUE
First Contentful Paint	1.4 s
Speed Index	3.2 s
Largest Contentful Paint	3.2 s
Time to Interactive	3.2 s
Total Blocking Time	0.21 s
Cumulative Layout Shift	0

OPPORTUNITIES	ESTIMATED SAVINGS
Avoid multiple page redirects	0.63 s
Reduce unused JavaScript	0.3 s

Google's PageSpeed Insights - Desktop

Google is indicating that your page is scoring well on their Desktop PageSpeed Insights evaluation.

✓

LAB DATA	VALUE
First Contentful Paint	0.4 s
Speed Index	1.1 s
Largest Contentful Paint	0.8 s
Time to Interactive	0.8 s
Total Blocking Time	0.03 s
Cumulative Layout Shift	0.001

OPPORTUNITIES	ESTIMATED SAVINGS
Avoid multiple page redirects	0.19 s

Flash Used?

No Flash content has been identified on your page.

✓

iFrames Used?

There are no iFrames detected on your page.

✓

Favicon

Your page has specified a Favicon.

✓

Email Privacy

Email addresses have been found in plain text.

✗

We recommend removing any plain text email addresses and replacing them with images or contact forms. Plain text email addresses can be susceptible to scrapers and email spammers.

Show Details

Legible Font Sizes

The text on your page appears to be legible across devices.

✓

Tap Target Sizing

The links and buttons on your page appear to be appropriately sized for a user to easily tap on a touchscreen.

Performance Results

Your performance is good

Your page has performed well in our testing meaning it should be reasonably responsive for your users, but there is still room for improvement. Performance is important to ensure a good user experience, and reduced bounce rates (which can also indirectly affect your search engine rankings).

Website Load Speed

Your page loads in a reasonable amount of time.

Server Response

All Page Content Loaded

All Page Scripts Complete

Website Download Size

Your page's file size is reasonably low which is good for Page Load Speed and user experience.

Download Page Size

Download Page Size Breakdown

Compression Usage (Gzip, Deflate, Brotli)

Your website appears to be using a reasonable level of compression.

Compression Rate

Compression Rates

HTML	88% compressed of 0.16MB
CSS	85% compressed of 0.11MB
JS	69% compressed of 1.18MB
Images	35% compressed of 0.08MB
Other	62% compressed of 0.34MB
Total	69% compressed of 1.87MB

Resources Breakdown

This check displays the total number of files that need to be retrieved from web servers to load your page.

76	1	24	2	35	14
Total Objects	Number of HTML Pages	Number of JS Resources	Number of CSS Resources	Number of Images	Other Resources

Google Accelerated Mobile Pages (AMP)

This page does not appear to have AMP Enabled.

Show Details

JavaScript Errors Your page is not reporting any JavaScript errors.	✓
HTTP2 Usage Your website is using an outdated HTTP Protocol. We recommend enabling HTTP/2+ Protocol for your website as it can significantly improve page load speed for users.	✗
Optimize Images All of the images on your page appear to be optimized.	✓
Minification All your JavaScript and CSS files appear to be minified.	✓
Deprecated HTML No deprecated HTML tags have been found within your page.	✓
Inline Styles Your page appears to be using Inline Styles. Inline Styles are an older coding practice and discouraged in favor of using CSS style sheets, due to their ability to degrade page load performance and unnecessarily complicate HTML Code. Show Details	✗
